

GAIN CONTROL OVER YOUR DATA.

ONEVIEW CONNECT

XMLAW SUITE

Designed exclusively for Microsoft® SharePoint®, the XMLAW suite of enterprise software products:

- Provides a comprehensive environment for rapidly connecting and delivering information from internal line-of-business systems, as well as external sources
- Acts as a seamless extension of the SharePoint environment, from installation and configuration through end-user personalization
- Operates through native SharePoint Web Parts, search results, and SharePoint-based applications and templates

A COMPLETE, EFFICIENT SHAREPOINT SOLUTION.

XMLAW's OneView™ Connect takes full advantage of the features and benefits of the SharePoint platform while seamlessly combining content and functionality from existing systems in a consistent, familiar interface. It helps legal professionals gain control over information, be more productive, and respond quickly to client demands by bringing together content and functionality from disparate applications and data sources to create a secure, unified system.

Built on proven technology with nearly 100,000 users, OneView Connect offers significant time and money savings when compared to other products and solutions developed in-house. It requires no additional coding or development and can be deployed quickly.

OneView Connect provides dozens of preconfigured, pluggable connectors for commonly used law firm systems such as document management, customer relationship management, and time and billing, in addition to configurable connectors for standard content sources such as relational databases, Web services, and even SharePoint-based information.

CONNECTING INFORMATION.

As an integration layer, OneView Connect uses connectors to aggregate information from multiple, different systems. Connectors provide secure access to an information source, translating data in different formats to a common format for consistent usage. A standard set of connectors are available for most database applications and content sources that support industry standard connectivity, such as ODBC or OLEDB.

OneView Connect also exposes connected information through industry-standard RSS 2.0 and Web service interfaces for use in custom applications outside of the SharePoint environment, RSS readers, or other applications that can consume RSS or Web service content.

"XMLAW products made it possible for us to build an intranet that exceeded our expectations."

CKO – Am Law 200 Firm

DELIVERING INFORMATION.

XMLAW solutions provide several methods for integrating content from line-of-business systems and delivering it in SharePoint pages, including published application programming interfaces, Web services, and direct database access. These techniques allow for integration with most legal-specific applications.

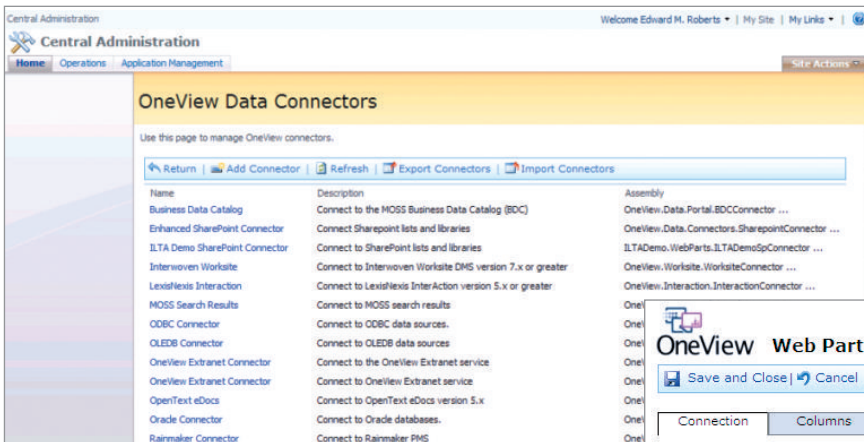

Out-of-the-box data connectors include:

- Hubbard OneSM BDS
- ContactNet
- Interwoven WorkSite
- OpenText eDocs
- SharePoint (including list-based content, MOSS search index, and user profile database)
- Database (SQL server, Oracle, ODBC, OLEDB)
- Web services
- RSS sources
- CRM systems

XMLAW solutions provide extensible data connector architecture so a law firm's IT department has the flexibility to build custom data connectors, if and when necessary.

The XMLAW platform is also used regularly to deliver content from, but not limited to, these applications:

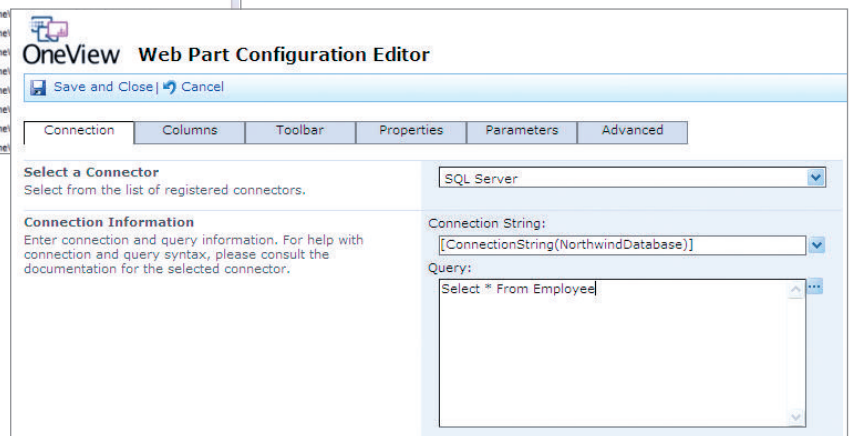

- Elite[®]
- Aderant/CMS
- LegalKey
- iVantage
- PeopleSoft
- CarpeDiem
- Any SQL server, Oracle, ODBC, OLEDB, or Web service-accessible data source

OneView Connector Catalog

MULTIPLE DOCUMENTS AND FORMATS.

The worksite folder contains a broad range of document types and formats, so you can see everything related to a particular client or matter. Administrators can integrate content with the appropriate connectors. The Configuration Editor is an intuitive tool for executing the connection.
