

CUSTOMIZED CLIENT COLLABORATION.

ONEVIEW EXTRANET

XMLAW SUITE

Designed exclusively for Microsoft® SharePoint®, the XMLAW suite of enterprise software products:

- Provides a comprehensive environment for rapidly connecting and delivering information from internal line-of-business systems, as well as external sources
- Acts as a seamless extension of the SharePoint environment, from installation and configuration through end-user personalization
- Operates through native SharePoint Web Parts, search results, and SharePoint-based applications and templates

REDUCE INFORMATION OBSTACLES AND EXCEED EXPECTATIONS.

Today's clients demand much more from their attorney relationships. From detailed timekeeping reports to up-to-date billing information and increased collaboration, firms need to offer clients more than service and expertise – they need to have the right technology to meet and exceed their clients' expectations.

XMLAW's OneView™ Extranet offers a secure location for attorneys and legal professionals to collaborate and share information with clients. It also provides a complete environment for automating the creation of integrated, secure extranet workspaces, allowing you to provide a higher level of client service and retain client loyalty.

EASY, FAST SHARING FOR ATTORNEYS.

Using OneView Extranet, attorneys can share documents with their clients as easily as sending an email. The information can include detailed timekeeping reports, up-to-date billing information, and collaborative drafts of legal and business documents.

Each client and each client matter can have a customized site, and any number of internal or external users can have access to the site without compromising security. Attorneys and clients can share documents, contact data, and other information through a controlled, automated, and audited publishing tool.

ON-DEMAND AVAILABILITY FOR CLIENTS.

With OneView Extranet, clients have access to documents, matter details, and other information at their convenience, whenever they need it. On-demand access to information in a secure and auditable environment means significant time savings for the client and lower costs for information processing and distribution for the firm and, ultimately, the client.

STREAMLINED IT OPERATIONS.

OneView Extranet provides SharePoint technologists and IT pros with a complete framework that makes it easy to build and deploy SharePoint-based client extranets. OneView Extranet streamlines the process for launching new client sites, creating user accounts, and assigning security. It also provides ongoing usage tracking, auditing, and reporting.

“OneView Extranet will allow us to provide a new level of service to clients and grow relationships.”

CKO – Am Law 200 Firm

BENEFITS.

- Automated management and creation of SharePoint-based extranet workspaces
- Streamlined, controlled sharing of documents from internal document management systems

- External user management outside of Active Directory
- Automated, workflow-driven template, site, and user creation and management
- Extranet site director that provides site tracking and extensible metadata

The image displays two screenshots of the OneView Extranet interface. The left screenshot, labeled 'Administrator View', shows a dashboard with a navigation menu on the left containing 'Quick Search', 'My Extranet Sites', and 'Activity Feed'. The main content area lists various extranet sites with columns for 'Request Site', 'Title', and 'Status'. The right screenshot, labeled 'End User View', shows a dashboard with a navigation menu on the left containing 'Quick Links', 'News and Announcements', 'Project Management', and 'Agreements'. The main content area displays news items, project management tasks, and agreement details.

End User View
