

SIMPLE SEARCH. ACTIONABLE RESULTS.

ONEVIEW SEARCH

XMLAW SUITE

Designed exclusively for Microsoft® SharePoint®, the XMLAW suite of enterprise software products:

- Provides a comprehensive environment for rapidly connecting and delivering information from internal line-of-business systems, as well as external sources
- Acts as a seamless extension of the SharePoint environment, from installation and configuration through end-user personalization
- Operates through native SharePoint Web Parts, search results, and SharePoint-based applications and templates

SEARCH DOESN'T HAVE TO BE COMPLICATED.

Attorneys and legal professionals rely on easy access to information – which isn't simple to provide, considering the rapidly increasing volumes of information both inside and outside a firm. Knowledge management and IT professionals are constantly challenged to deliver information in new ways that make it easier to find, use, and share.

XMLAW's OneView™ Search enables quick searching of sources from within and outside your law firm. It searches multiple formats, delivering what users need most: fast, relevant, and actionable search results.

OneView Search is built on Microsoft search technology in both MOSS 2007 and Search Server 2008. It extends Microsoft search into your existing systems, while respecting security, mapping metadata, and optimizing content for fast, reliable indexing. Unlike other search solutions, OneView Search does not include overly complicated features and components that drive up costs and implementation effort without providing an adequate return on investment.

ATTORNEY-FRIENDLY SEARCH.

OneView Search gives attorneys additional insight and control over documents and related firm information. Using its familiar, intuitive interface, attorneys can quickly:

- **Search** across multiple sources of information
- **Refine** and navigate search results by client, matter, attorney, and other categories
- **Integrate** the firm's work product from West km® and other knowledge management services with Westlaw® content and tools

AN EXPANDED ROLE FOR KNOWLEDGE MANAGEMENT.

With OneView Search, knowledge management professionals can provide search solutions that deliver higher quantity and quality answers than any one system can offer. They can index multiple sources together and relate those sources through simple metadata mapping and merging.

"Our attorneys think of OneView Search as our firm's own, personalized 'Google' – it's that powerful and that important."

CKO – Am Law 200 Firm

ENHANCED USER EXPERIENCE.

- Enhanced OneView Search Center site template
- Customizable faceted navigation of search results
- Context-sensitive actions on search results, powered by OneView Connect
- MOSS search results connector for OneView Connect for dynamic, contextual search throughout a SharePoint environment

SEARCH AND METADATA CONNECTORS.

- West km
- Interwoven Worksite
- OpenText eDocs and DOCS Open®
- OpenText LegalKEY
- PTI RealPractice
- LexisNexis Interaction
- Any SQL server, Oracle, ODBC, or OLEDB data source

ADMINISTRATIVE FEATURES.

- Optimized full and incremental indexing processes, enabling rapid index of large volumes of content
- Content source metadata mapping and merging using Metadata Connectors
- Automated security mapping to Active Director for index security
- Administrative tools integrated into SharePoint Central Administration

COMPREHENSIVE RESULTS.

Seamlessly search across multiple content sources and formats, and refine search results by client, matter, attorney, and other information.

The screenshot displays the OneView Search interface. At the top, there is a search bar with 'intel' entered and a 'Search' button. Below the search bar, there are navigation tabs for 'All Sites', 'People', 'Documents', 'Contacts', and 'Matters'. The main content area shows search results for 'intel', including a list of results on the left and a detailed view of the first result on the right. The detailed view shows the Intel Corporation logo and a summary of the company, followed by a list of related documents and their metadata.
